TO: DC Medicaid Dental Providers and EPSDT/HealthCheck Providers

FROM: Melisa Byrd
Senior Deputy Director and State Medicaid Director

DATE: February 1, 2022

SUBJECT: National Children's Dental Health Month, Dental Procedures and Billing Requirements

All District of Columbia children eligible for the Medicaid program are entitled to receive the care described in the Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) services benefit. EPSDT, also known as HealthCheck in the District, is a mandatory Medicaid benefit that includes preventive and specialty care, including dental services. Preventive care rendered by EPSDT primary care providers during a well-child visit includes oral health assessments for all ages and fluoride varnish application for children under the age of three (3). Furthermore, comprehensive oral exams, dental sealants, and dental cleanings are also covered by Medicaid, as well as any needed diagnostic or treatment services identified by dental providers.

Unfortunately, due to the ongoing public health emergency, local and national data have shown a decline in service utilization for children covered by Medicaid, indicating that children and families have likely been delaying necessary medical and dental health care during the COVID-19 pandemic.¹ Delays in care can result in missed opportunities to manage chronic conditions or diagnose and treat health issues.² In this challenging time, it remains critical for pediatric Medicaid beneficiaries to receive all necessary services included in the EPSDT benefit, including well-child visits (through telemedicine or in-person appointments) and preventive dental screenings.

In celebration of National Children’s Dental Health Month in February, the purpose of this transmittal is to inform dental and EPSDT providers of the state of children’s oral health in the District of Columbia, and of Medicaid-covered oral health procedures administered in primary care and dental settings.

Dental Care for District Children – Current Statistics and Guidelines

The American Academy of Pediatric Dentistry recommends that children visit a dentist at the
time of the eruption of the first tooth, no later than 12 months of age, and every 6 months
thereafter. In 2020, 37% of the District of Columbia’s children under age 21 enrolled in DC
Medicaid received a preventive service from a dentist.3

Childhood cavities and decay are preventable with early preventive measures, early detection,
and treatment.4 According to the American Academy of Pediatrics and the Centers for Disease
Control and Prevention, tooth decay is the single most common chronic childhood disease (5
times more common than asthma).5 Applying dental sealants to the chewing surfaces of the back
teeth is one common way to prevent tooth decay. However, only 9% of DC children between the
ages of 6-14 received dental sealants on a permanent molar tooth.6 Studies show that dental
sealants reduce decay in the permanent molars by 81% for 2 years after they are placed on the
tooth and continue to be effective for 4 years after placement.7

Children’s Oral Health Initiative

The DC Department of Health Care Finance (DHCF), through the Children’s Oral Health
Initiative, is in active collaboration with the health care provider community, Managed Care
Organizations (MCOs), and the DC Department of Health (DC Health) in an effort to improve
the oral health of the District’s children. DHCF convenes the Children’s Oral Health Initiative
regularly to implement strategies aimed at increasing children’s access to and the utilization of
oral health services.

Oral Health Assessments During Well-Child Visits

Oral health assessments are a required part of every primary care well-child visit for young
children so that primary care providers can assist in identifying children who need dental care.
Every infant should receive an oral health risk assessment by 6 months of age that includes: (1)
assessing the patient’s risk of developing oral disease using the American Academy of
Pediatrics’ Oral Health Risk Assessment Tool; (2) providing education on infant oral health; and
(3) evaluating and optimizing fluoride exposure.

Children at risk for dental caries should be referred to a dentist as early as 6 months after the first
tooth erupts, or 12 months of age for establishment of a dental home. Children at risk are defined as:

- Children with Special Health Care Needs.
- Children of mothers with high caries rate.
- Children with demonstrable caries, plaque, demineralization, and/or staining.

DOI: 10.1002/14651858.CD001830.pub4.
- Children who sleep with a bottle or breastfeed throughout the night, later-order offspring, or
- Children in families of low socio-economic status.  

Primary care providers should advise parents to establish a dental home for their child by 12 months of age. Every child has a primary dental provider available through their MCO. The child’s primary dental provider will provide dental examinations, render any indicated treatment services, as well as anticipatory guidance in managing long-term oral health conditions. At a minimum, all children should have an established primary dental provider by three (3) years of age.

**Reimbursable Oral Health Procedures in Primary Care Setting**

In addition to regular oral health assessments, the application of fluoride varnish every three to six months has been proven to decrease the incidence of early childhood caries (ECC). A child is considered to have ECC when there is one or more decayed, missing (due to caries), or filled tooth surface in any primary tooth before the child turns 6 years of age. Primary care providers may bill DC Medicaid for oral health assessments using Current Dental Terminology (CDT) code D0191. CDT code D0191 is reimbursable at a rate of $30.00 per assessment.

Children at high risk for ECC benefit from quarterly applications of fluoride varnish, while those with low to moderate risk should receive fluoride varnish applications every 6 months. The application of fluoride varnish for children under the age of 3 by a trained primary care provider is a reimbursable oral health procedure. In order to receive Medicaid reimbursement, primary care providers must complete the fluoride varnish training offered through DC HealthCheck. Once trained, primary care providers may bill DC Medicaid for the fluoride varnish application on a child less than three (3) years of age using the Current Procedural Terminology (CPT) code 99188. CPT code 99188 is reimbursable once every 3 months per beneficiary at a rate of $11.44 per application.

**Reimbursable Dental Procedures in Dental Office**

According to the American Academy of Pediatric Dentistry, early detection and management of oral conditions can improve a child’s oral health, general health and well-being, and school readiness.

A child’s first dental examination should occur at the time of the eruption of the first tooth and no later than 12 months of age. Comprehensive oral exams, dental sealants, and dental cleanings, as well as any needed diagnostic or treatment services identified by dental providers, are covered by DC Medicaid.

---

10 There are no limitations on the scope or frequency of EPSDT services (including dental services) so long as they meet medical necessity criteria under federal law. 42 USC 1396d(r)(5); 42 CFR 440.230(b) (“Each service must be sufficient in amount, duration and scope to reasonably achieve its purpose”).
Caries risk assessment is a key element of preventive oral health care for infants, children, and adolescents. Children at high risk for caries benefit from quarterly applications of fluoride varnish, while those with low to moderate risk should receive fluoride varnish applications every six months. The application of fluoride varnish is a reimbursable dental procedure. Dental providers may bill DC Medicaid for fluoride varnish application using CDT code D1206. CDT code D1206 is reimbursable once every 3 months per beneficiary at a rate of $29.00 per application.

The application of dental sealants to the chewing surfaces of the back teeth is another method to prevent tooth decay. The American Academy of Pediatric Dentistry recommends the application of dental sealants on caries-susceptible primary molars, permanent molars, premolars, and anterior teeth with deep pits and/or fissures on children ages 24 months and older. Dental providers may bill DC Medicaid for dental sealants on children ages 24 months and older using CDT code D1351. CDT code D1351 is reimbursable at a rate of $38.00 per tooth.

Children’s National Hospital’s Community Dental Health Coordinator Project
In 2022, Children’s National Hospital will continue their initiative to address barriers to oral health care for Medicaid-enrolled children in Wards 7 and 8. The program aims to improve coordination of care between a child’s primary care team and their dental home through the integration of a Community Dental Health Coordinator into the existing pediatric health center system.

The Community Dental Health Coordinator is a new and important role within the health care team based on the American Dental Association model. In addition to oral health promotion and disease prevention, the coordinator will engage directly with children and families who are at-risk for dental disease but experiencing obstacles to connecting with dental health services.

This role and the project are made possible through the support and oversight of the United States District Court for the District of Columbia.

The Community Dental Health Coordinator’s efforts will complement efforts by DHCF, the MCOs, and other stakeholders to address gaps in care. Project activities and updates will continue to be shared at Children’s Oral Health Initiative meetings.

Provider Resources
The DC HealthCheck Periodicity schedules reflect the Bright Futures/American Academy of Pediatrics and the American Academy of Pediatric Dentistry guidelines. Both the dental and primary care DC HealthCheck periodicity schedules are available on www.dchealthcheck.net. DHCF requires all pediatric primary care providers to complete EPSDT training and strongly encourages fluoride varnish training, both of which are available through the DC HealthCheck website. DHCF also strongly encourages all EPSDT and dental providers to display the attached DC Medicaid Dental Benefits brochure in their waiting rooms.

DHCF Contact Information
If you have any questions about the information contained in this transmittal, or need additional information, please contact Colleen Sonosky, Associate Director, Division of Children’s Health
Services (colleen.sonosky@dc.gov) or Dr. Antonio Lacey, Program Analyst, Division of Clinician, Pharmacy and Acute Provider Services (antonio.lacey@dc.gov).

Thank you for providing oral health services to pediatric beneficiaries of the DC Medicaid program during the COVID-19 public health emergency.
