CRISP Report to the DC HIE Policy Board

October 15th, 2020

Recent Areas of Focus

- Continued expansion of access to general CRISP HIE services

- Increased Marketing and Communications Presence

- Support of our participant's response to the pandemic

- Creating a foundation for SDOH data exchange

- Gathering stakeholder feedback for BH data exchange

- Implementation of new use cases related to public health

Public Facing Metrics Dashboard

[Metrics Dashboard](#)

CRISP DC

Chesapeake Regional Information System for our Patients (CRISP)

District of Columbia

Welcome to CRISP DC's interactive resource on health information exchange adoption and use.

As the District of Columbia's Designated HIE Entity since early 2020, CRISP DC is the DC Department of Health Care Finance's (DHCF) organizational partner for providing citywide HIE services. CRISP DC is committed to supporting the development and maintenance of HIE services in order to facilitate the secure, electronic exchange of health information among the District Registered HIE entities and participating organizations in the District.

As the District's Designated HIE Entity, CRISP DC developed this interactive resource in partnership with DHCF to incrementally track progress of District-wide HIE adoption and use. This resource is intended to give the user the ability to view performance metrics, including the number of providers who are utilizing CRISP throughout the District and the total number of organizations contributing data to CRISP over time.

Designation Activities

CRISP Shared Services increases DC Representation in HIE Technology and Operations Governance

- CRISP DC shares HIE technology with CRISP Maryland and West Virginia Health Information Network. This creates important economies of scale – allowing us to implement more technology at lower cost.

- Through the non-profit "CRISP Shared Services" HIE assets are formally governed by representatives from all three regions

- CRISP DC's interests are represented on the board of CRISP Shared Services and other committees by members of the DC healthcare community as determined by the CRISP DC Board of Directors.

# Creation of a new CRISPDC.org Webpage

- CRISP DC has partnered with DC based company nClud to improve our web presence

- We have kicked off the project and are hoping to have a new website ready over the next several months

- We are putting a heavy focus on easy and understandable access to our policies and procedures

- We are also engaged in better SEO (search engine optimization) so that a Google Search for CRISP DC brings our new page to the top

Operational Updates

CRISP DC

General Operational Updates

- Services are running normally after a large upgrade to our MPI this month

- CRISP had its tabletop privacy/security exercise in September to test our response to a simulated security event

- The team continues to work virtually without disruption

Notable Use Case Implementations

- Lead Registry Integration
  - Display of Lead Screening Results in the HIE through partnership with DOEE
- DC PDMP Integration
  - Display of PDMP data in the HIE through partnership with DC Health and Appriss Health
- P4P Reporting Capability Pilot
  - Provider facing access to population health reports
- SDOH Referral Pilot
  - Provider facing access to send a patient referral to a community benefit organization
- Support for MCOs during transition
  - Bulk Exchange of Care Team and Clinical Data to MCOs receiving new members

CRISP Program Referral Tool

CORIE's goal is to allow providers and CBOs to make referrals in the systems they use every day

If an organization does not have access to such a system they can use the CRISP ULP to make and receive referrals

Referral routing will also be available into existing SDOH systems like Aunt Bertha

The Referrals tab opens with patient demographic information prepopulated

CRISP Referral Receipt (In Development)
